

Environmental Policy

Ecoserv Group is committed to protecting the environment, both now and for the future.

Paramount to this is the ongoing communication between our customers, suppliers, and site management to develop environmental solutions to comply with current and forthcoming legislation.

It is the Organisation's policy to proactively look for new initiatives to minimise the adverse effects of incidents such as the spillage of chemicals, improper disposal of waste, unnecessary emissions to water and the atmosphere, and noise pollution.

Training programmes are in place to ensure that all management and supervisory staff use the correct equipment, procedures and working practices and are aware of the environmental implications of the tasks connected with the needs of the customer.

The Organisation purchases recycled and/or paper products from sustainable sources and is updated regularly via studies carried out on the environmental impact of paper products, electric dryers, chemical usage, and disposal of chemicals.

Sub-contractors are expected to operate to the same high environmental standards and are strictly vetted and audited accordingly.

We are committed to working with suppliers who ensure that their manufacturing and packaging procedures produce environmentally friendly products, and we are affiliated with suppliers who support our efforts.

We believe that it is essential for our quality of life now and that of future generations to protect and maintain the environment to the best of our ability. Only by continuous commitment and education can we make a major contribution to the way we live.
